PROFESSIONAL SUMMARY

- Accomplished Full Stack & Back End Developer with 10+ years of hands-on expertise in enterprise application analysis, architectural design, implementation, systems integration, quality assurance, and production support, leveraging Java/J2EE and Object-Oriented Client-Server technologies.
- Demonstrated proficiency across all phases of the Software Development Life Cycle (SDLC), encompassing project proposal, process engineering, requirements analysis, solution design, iterative development, quality assurance, production deployment, and post release support.
- Applied full-stack development expertise across all SDLC phases utilizing JAVA, J2EE (Servlets, JSP, EJB), MVC Framework, Spring, Spring Boot, Hibernate, Java Swing, JDBC, JavaScript, Ajax, React.js, Golang, CSS, and HTML.
- Leveraged advanced Java 8 capabilities including Lambda expressions, Streams API, method references, and the Collections Framework to optimize data processing pipelines. Demonstrated proficiency in Apache Spark, Scala, and Apache Kafka for distributed computing and event driven architectures.
- Delivered expertise in Redux state management, component props, and React lifecycle methods to architect scalable, maintainable front end data flows.
- Accumulated extensive hands-on expertise with MVC frameworks including Spring and Spring Boot, and Object-Relational Mapping (ORM) tools such as Hibernate for enterprise-grade data persistence.
- Accumulated deep development expertise with opensource frameworks including Hibernate and Spring. Architected and delivered robust MVC solutions with design implementation via JSP.
- Demonstrated strong command of the Spring Framework ecosystem, including IoC/AOP container configuration, Spring Boot auto configuration, declarative and programmatic transaction management, and Spring-Hibernate integration.
- Utilized Eclipse, MyEclipse, and Apache Maven as core development and build automation tools across multiple enterprise engagements.
- Proficient with a broad suite of enterprise IDEs including MyEclipse, IBM Rational Application Developer (RAD), WebSphere Studio Application Developer (WSAD), and Rational Software Architect (RSA).
- Administered Docker container lifecycle management, encompassing image creation, environment configuration, runtime maintenance, and resource cleanup across development and production environments.

AREA OF EXPERTISE

- Spring, Spring Boot, Hibernate
- JAVA, J2EE (Servlets, JSP, EJB), MVC Framework, Spring, Spring Boot, Hibernate, Java Swing, JDBC, JavaScript.
- HTML, XML, XSLT, DOM, JSON, CSS, JavaScript, XPath, AJAX, React.js
- IBM Web Sphere, Apache Tomcat, BEA Web Logic, Apache Kafka.
- Oracle 11g/10g/9i, SQL Server, MySQL, PostgreSQL, Cassandra

WORK EXPERIENCE

Walmart Inc

Java Developer

Ohio, USA

November 2023 – January 2026

Participated across all SDLC phases encompassing requirements collection, customer specifications analysis, solution design, development, and application customization.

- Used Spring Boot for developing Micro-services and used REST to retrieve data from the client side using Microservice architecture.
- Used Spring Boot for developing stand-alone applications using Spring Tool Suite and generated Maven project using Jetty as an embedded server, added a RESTful Spring MVC Controller that responds to a request using post, and used Swagger for describing and documenting the RESTful APIs.

- Designed, developed, and validated J2EE components including Java Beans, XML processors, Collection Framework utilities, JMS messaging, JDBC data access, and JNDI lookups with Apache Tomcat deployments.
- Leveraged Spring Boot auto-configuration capabilities to accelerate cloud-native Microservice development and reduce boilerplate configuration overhead.
- Applied enterprise J2EE design patterns including Value Object, Business Delegate, Service Locator, Session Façade, Singleton, Factory, and DAO to ensure architectural consistency and code reusability.
- Developed Rest service for authentication using Spring Boot with embedded Tomcat server. Used spring boot for single sign-on page application to access more quickly.
- Administered Apache Cassandra cluster operations including node repairs and health monitoring via OpsCenter. Integrated Apache Kafka with Apache Spark using the Spark Streaming API for real-time data pipeline processing. Connected Spring Boot and Golang applications to Pivotal Cloud Foundry (PCF) for scalable cloud deployment.
- Conducted systematic REST API endpoint validation and functional testing using Postman.
- Engineered responsive, cross-device-compatible user interfaces aligned with customer accessibility requirements. Architected Kafka-based event processing solutions serving dual roles as a traditional message queue and a high-throughput streaming platform.
- Authored comprehensive unit test suites using Mockito for mock object injection and JUnit for test case execution, achieving robust code coverage.
- Delivered structured weekly status reports to project management, proactively surfaced technical blockers, and collaborated on resolution strategies.
- Utilized IntelliJ IDEA as the primary development environment; configured and executed Gradle build scripts to automate compilation, packaging, and server deployment workflows.
- Demonstrated hands-on proficiency with IntelliJ IDEA and Visual Studio Code as primary development and debugging environments.
- Adhered to Test-Driven Development (TDD), authored test case specifications prior to feature implementation, executed unit tests with JUnit, and applied Log4j for structured runtime exception logging.
- Integrated MongoDB and Mongoose ODM modules within Node.js services to implement document-based data persistence and schema validation.
- Delivered back-end Microservices development using Java 11 and Spring Boot, building scalable, independently deployable service components.
- Managed version control workflows in Bitbucket, including feature branching, release tagging, and repository maintenance.
- Configured Jenkins CI/CD pipelines to automate build and deployment processes to Pivotal Cloud Foundry (PCF) using Gradle.
- Applied Spring ORM for database abstraction, Spring IoC container for dependency management, Spring MVC for RESTful controller design, and Spring AOP for cross-cutting concerns such as logging and transaction management.

United Health Group/ Optum
Java Backend Developer

Schaumburg, USA
 August 2022 – June 2023

- Designed, developed, and validated J2EE components including Java Beans, XML processors, Collection Framework utilities, JMS messaging, JDBC data access, and JNDI lookups with Apache Tomcat deployments.
- Leveraged Spring Boot auto-configuration to accelerate cloud-native Microservice delivery with reduced configuration overhead. Developed RESTful Microservices using Spring Boot to facilitate scalable client-server data exchange within a distributed architecture.
- Applied enterprise J2EE design patterns including Value Object, Business Delegate, Service Locator, Session Façade, Singleton, Factory, and DAO to ensure architectural consistency and code reusability. Authored comprehensive unit test suites using Mockito for mock object injection and JUnit for test case execution, achieving robust code coverage.
- Used Spring Boot for developing stand-alone applications using Spring Tool Suite and generated Maven project using Jetty as an embedded server, added a RESTful Spring MVC Controller that responds to a request using post, and used Swagger for describing and documenting the RESTful APIs.
- Developed Rest service for authentication using Spring Boot with embedded Tomcat server. Used spring boot for single sign-on page application to access more quickly.

- Applied Spring Dependency Injection to enforce loose coupling between application tiers, improving maintainability and facilitating unit testing.
- Integrated Spring Boot applications with Pivotal Cloud Foundry (PCF) for cloud deployment and conducted comprehensive REST API endpoint validation using Postman.
- Demonstrated hands-on proficiency with IntelliJ IDEA and Visual Studio Code as primary development and debugging environments.
- Adhered to Test-Driven Development (TDD), authored test case specifications prior to feature implementation, executed unit tests with JUnit, and applied Log4j for structured runtime exception logging.
- Integrated MongoDB and Mongoose ODM modules within Node.js services to implement document-based data persistence and schema validation. Maintained Apache Kafka clusters including broker configuration, topic management, and implementation of Kafka Consumer, Producer, and Streams API components.
- Provisioned and managed scalable PaaS infrastructure leveraging Kubernetes for container orchestration, Docker for image management, and Terraform for infrastructure-as-code automation of cloud service deployment.
- Implemented Apache Kafka Streams topology for real-time data transformation and event processing, reducing pipeline latency and enabling faster analytical decision-making.
- Configured Prometheus Alert manager rules and notification channels to establish robust incident alerting, ensuring timely escalation of critical system events.
- Collaborated cross-functionally to implement CI/CD pipelines for MongoDB-backed applications, streamlining automated build, test, and deployment workflows.
- Developed back-end Microservices using Java 11 and Spring Boot. Performed Apache Cassandra cluster health assessments, load balancing configurations, and name node metadata backup operations.
- Managed version control workflows in Bitbucket, including feature branching, release tagging, and repository maintenance.
- Configured Jenkins CI/CD pipelines to automate build and deployment processes to Pivotal Cloud Foundry (PCF) using Gradle.
- Applied Spring ORM for data persistence abstraction, Spring IoC for dependency injection, Spring MVC for RESTful endpoint design, and Spring AOP for cross-cutting concern implementation.

Carbon Health
Full Stack Developer

Austin, USA
June 2021 – July 2022

- Executed system analysis and solution design using Object-Oriented Analysis and Design (OOAD) methodology to capture, model, and validate business requirements.
- Developed responsive, dynamic web interfaces using React.js and implemented server-side business logic and REST APIs using the Spring Boot Framework.
- Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods, and Concurrency API.
- Used Java 8 Method References feature to point to methods by their names and used functional Interfaces.
- Designed, developed, and validated J2EE components including Java Beans, XML processors, Collection Framework utilities, JMS messaging, JDBC data access, and JNDI lookups with Apache Tomcat deployments.
- Used Spring Boot for developing Micro-services and used REST to retrieve data from the client side using Microservice architecture.
- Developed reusable React functional components, integrated Axios-based service layers to consume Spring RESTful endpoints, and utilized React lifecycle hooks to trigger API calls at appropriate component stages.
- Implemented custom form components with client-side validation logic and leveraged Axios HTTP client to transmit form data to Spring REST endpoints via POST requests.
- Deployed containerized Microservices to AWS Elastic Kubernetes Service (EKS) clusters and integrated AWS RDS for relational data persistence and Amazon Elasticsearch for full-text search capabilities.
- Architected and delivered production-grade REST-based Microservices using Spring Boot with adherence to API design best practices.
- Utilized Spring Boot auto-configuration to develop and deploy stand-alone Spring applications with embedded server runtime.
- Delivered feature enhancements and resolved defects across the full stack utilizing Java, React.js, Spring, and Hibernate.

- Implemented EJB Session Beans to encapsulate business workflow logic and leveraged Hibernate ORM for transactional data access and persistence.
- Established inter-application messaging using IBM MQ Series (JMS) and Spring Integration to enable reliable, asynchronous service-to-service communication.
- Applied Java Architecture for XML Binding (JAXB) to perform bidirectional mapping between Java domain objects and XML representations for data interchange.
- Validated SOAP Web Services using SoapUI and authored XML Schema Definitions (XSD) and XSLT transformations to parse inbound requests and generate specification-compliant response payloads.
- Architected and delivered web GUI components using HTML5, Node.js, React, and JavaScript, adhering to MVC architectural patterns for clean separation of presentation and logic.
- Managed server-to-client data exchange workflows using Node.js, implementing middleware and routing logic for performant, secure data transmission.
- Maintained and expanded AWS (Cloud Services) infrastructure using AWS Stack, defined AWS Security Groups which acted as virtual firewalls that controlled the traffic allowed reaching one or more AWS EC2 instances.
- Built Docker container images for application packaging and configured dynamic Jenkins agent provisioning to enable scalable, parallelized CI/CD pipeline execution.
- Integrated Log4j logging framework with configurable severity levels to capture application events, warnings, and runtime exceptions for operational visibility.
- Authored and executed JUnit test cases to validate functional correctness of individual software components at the unit level.
- Managed project build lifecycle using Apache Maven, configured dependency management, plugin integrations, and automated deployment of WAR artifacts to Apache Tomcat.
- Designed relational database schemas, created normalized table structures, and authored complex SQL queries and stored procedures to fulfill business data requirements.
- Designed and implemented required database table structures within Oracle SOA Suite to support enterprise service integration workflows.
- Managed and maintained Oracle and NoSQL (MongoDB) databases in the production domain.
- Delivered analysis, design, and implementation deliverables within an Agile framework, participating in sprint planning, backlog refinement, and iterative release cycles.

Panera Bread Food Corps
Full Stack Developer

St. Louis, USA
 April 2020 – May 2021

- Leveraged Java 8 Streams API and functional filter techniques to deliver optimized, declarative data processing across the application codebase.
- Architected the business service layer using Core Java, Spring Beans with Dependency Injection, and annotation-driven Spring configuration to enforce loose coupling and modularity.
- Engineered Spring Batch ItemReader and ItemWriter components to process and persist bulk data records to the database as part of scheduled batch processing workflows.
- Developed Rest service for authentication using Spring Boot with embedded Tomcat server. Used spring boot for single sign-on page application to access more quickly.
- Delivered RESTful web services using Spring Boot and deployed the application to Pivotal Web Services (Cloud Foundry) for cloud-hosted production operation.
- Engineered cloud-native Microservices and implemented application-level backup and recovery strategies using Spring Boot.
- Designed and iteratively enhanced responsive web application layouts and interactive form components using HTML5, CSS3, and JavaScript.
- Developed React service integrations using Axios for HTTP communication and leveraged RxJS Promises and Observables to manage asynchronous data flows across multiple components.
- Delivered a Single Page Application (SPA) using React, implementing two-way data binding to specific views and real-time server synchronization for a seamless user experience.
- Developed multiple proof-of-concept (POC) implementations to validate and demonstrate Backend-to-Frontend integration strategies using React.
- Delivered the complete project using Eclipse IDE integrated with Apache Maven for automated dependency resolution, build lifecycle management, and artifact packaging.

- Applied Hibernate ORM framework to manage relational data persistence, entity lifecycle, and declarative transaction management.
- Implemented Hibernate in the data access layer (DAL) to perform CRUD operations, manage entity state transitions, and execute HQL queries against the relational database.
- Built Docker images via custom Docker files and orchestrated multi-container application environments using Docker Compose for consistent, reproducible deployments.
- Used AWS to deploy the project on an EC2 instance. Highly created fault-tolerant, highly scalable Java application using AWS Elastic Load Balancing, EC2, VPC, and S3 as part of process and security improvements.
- Developed the application using Eclipse IDE and delivered iterative application features within an Agile development environment.
- Implemented EJB Message-Driven Beans (MDBs) and JMS message queues to support asynchronous, decoupled inter-component communication.
- Integrated Log4j for application event logging, error capture, and runtime diagnostic tracing across all service layers.
- Authored and executed Maven build scripts to compile, package, and deploy the application to IBM WebSphere Application Server.
- Authored Oracle PL/SQL stored procedures, database triggers, and views to implement server-side business logic and enforce data integrity constraints.
- Participated in unit and integration testing, defect resolution, user acceptance testing (UAT) with documented test cases, and peer code reviews to ensure production-ready quality.

First National of Nebraska

Java Developer

Omaha, USA

Oct 2018 – March 2020

- Delivered enterprise application development using the Spring Framework with a classical MVC architecture. Produced UML artifacts including use case diagrams, class diagrams, sequence diagrams, collaboration diagrams, and activity diagrams to document and communicate system design.
- Contributed within an Agile delivery environment, utilizing a Content Management System (CMS) for structured workflow orchestration and content version control.
- Architected and delivered Business Service components applying Spring Framework Dependency Injection and Data Access Object (DAO) design patterns for clean separation of persistence and business logic.
- Implemented Hibernate ORM integrated with Spring as a data abstraction layer, leveraging annotation driven Spring Dependency Injection (DI) to decouple database interaction from business logic.
- Applied Spring Dependency Injection to enforce loose coupling between application tiers, improving maintainability and facilitating unit testing.
- Leveraged Hibernate ORM in conjunction with the Spring Framework to manage relational data persistence and declarative transaction boundaries.
- Utilized Hibernate ORM mapping configurations to perform efficient, type-safe data persistence and retrieval operations against the relational database.
- Authored Maven build scripts to automate compilation, WAR packaging, and deployment workflows to Apache Tomcat server environments.
- Authored JUnit test cases to verify the functional correctness of individual Java classes and service components.
- Authored optimized SQL queries, stored procedures, and database triggers to implement back-end data processing and enforce referential integrity.
- Implemented generic database connection pooling via Tomcat JDBC and Spring configuration, and performed SQL query optimization to improve data access performance.
- Delivered technical mentorship to junior team members, provided production system support, and customized solutions to address evolving business requirements.

Capgemini Pvt. Ltd.

Software Engineer

Mumbai, India

March 2016 – Sep 2018

- Applied enterprise J2EE design patterns including Value Object, Business Delegate, Service Locator, Session Façade, Singleton, Factory, and DAO to ensure architectural consistency and code reusability.
- Delivered application development under a J2EE multi-tier architecture utilizing JSP for view rendering, Spring for dependency injection and MVC control flow, and Java Beans for data encapsulation.

- Integrated Hibernate ORM with the Spring Framework to implement a unified data persistence strategy with declarative transaction management.
- Implemented asynchronous inter-service communication using the Java Message Service (JMS) API for reliable, decoupled message exchange.
- Authored and deployed Oracle SQL stored procedures, user-defined functions, and database triggers to encapsulate business logic at the persistence tier.
- Designed and delivered SOAP-based Web Services with XML message contracts, including dedicated services for Payment Transaction processing and Payment Release workflows.
- Implemented Log4j-based error logging to capture and record application exceptions and diagnostic events for operational monitoring.
- Applied JUnit to author unit tests and isolate functional defects during the debugging and validation phases of development.
- Managed source code versioning and collaborative development workflows using Apache Subversion (SVN) for branching, merging, and release tagging.
- Authored comprehensive technical reports and developer documentation manuals throughout the program development lifecycle to support knowledge transfer and maintainability.
- Served as a technical point of contact for end-user issue resolution and delivered mentorship to business users to promote platform adoption and self-sufficiency.

EDUCATION

University of the Cumberlands
Master of Science in Computer Science

May 2026

University of Dayton
Master of Science in Engineering Management

December 2021

Nagpur University
Bachelor of Engineering in Mechanical Engineering

Nagpur, India
